

Organic

GC FullForce

Balanced humic and fulvic acids plus soil biological activators

GC FullForce is a soluble humate substance with the ideal balance between humic acids and fulvic acids.

Key Product Attributes

Organic certified for use through soil and foliar application.

Wettable powder derived from Leonardite and organic substances formulated to stimulate soil biological activity and enhance nutrient uptake.

High levels of humic acids to increase nutrient retention in soils, prevent phosphorous fixation in the soil and increase root development.

Fulvic acids provide an Auxin-like effect that promotes early canopy development.

Main Use

Increases nutrient retention and cation exchange capacity of soils and growing media.

Stimulates microbial activity in the soil and improves nutrient availability.

Increases seed germination and root development.

Analysis (w/w)

Total Humic Extract	75.0% w/w
Humic Acids	30.0% w/w
Fulvic Acids	45.5% w/w
Potassium Oxide (K ₂ O)	10.0% w/w
pH	10

Application Rates

Crop	Rate for soil application
Vegetables and ornamentals	Apply at 4 - 8 kg/ha after transplanting or during early vegetative growth stage
Blueberry, Strawberry and Raspberry	Apply at 4 - 8 kg/ha after transplanting or during early vegetative growth stage
Fruit trees, olives, vines and citrus	Apply at 6 - 10 kg/ha after transplanting or during early vegetative growth stage
Olives	Apply at 4 - 6 kg/ha after transplanting or during early vegetative growth stage
Industrial crops	Apply at 4 - 8 kg/ha after transplanting or during early vegetative growth stage

Foliar application is possible at 1 to 2 kg/ha during the vegetative crop stage.
