

# GC Micro Fruitset

Maximizing flowering and fruit set

GC Micro Fruitset is a water-soluble fertiliser specifically designed to support flowering and fruit set.

## Key Product Attributes

Crystalline and acidic formulation with amino acids to keep boron and molybdenum fully available for leaf absorption.

Formulated with natural polyol biopolymers for rapid absorption and translocation of nutrients.

## Analysis (w/w)

Total Nitrogen (N)	6% w/w
Ammoniacal Nitrogen	6% w/w
Total Phosphorous Pentoxide soluble in water ( $P_2O_5$ )	30% w/w
Boron soluble in water (B)	8% w/w
Molybdenum soluble in water (Mo)	2% w/w

## Main Use

GC Micro Fruitset provides phosphorus, a fundamental element in the fertility of flower buds, molybdenum and boron, essential microelements in the phases of flowering, fruit set and fruit development.

Ideal for crops sensitive to the lack of molybdenum, such as cucurbits, cruciferous vegetables and legumes, among others.

## Application Rates

**Foliar Application:** Dose 1.5 to 3 kg / ha. Apply from pre-flowering stage up to 10 to 15% of the open flowers (repetition is necessary in continuously flowering crops).
