# GC BioForce Ca

Quick and long-lasting calcium soil amendment to increase soil pH and enhance crop performance

**GC BioForce Ca is a granulated technology with high levels of calcium and magnesium.**

## Key Product Attributes

GC BioForce Ca is a black minigranular fertiliser (2.7 – 3.7 mm) designed for increasing the pH of acidic soils and activating the soil biology for higher crop performance.

Organic certified with added technologies (humic substances, amino acids and micro elements).

Fast solubility for quick corrective action of soil pH and long-lasting effect.

## Analysis (w/w)

Total Calcium Oxide (CaO)	30%
Total Magnesium Oxide (MgO)	4.5%
Magnesium Oxide soluble in water (K <sub>2</sub> O)	1.5%
Sulphur trioxide soluble in water (SO <sub>3</sub> )	10%
Manganese (Mn)	0.1%
Zinc (Zn)	0.1%
Neutralizing Value	25%
Granule size	98% between 2.7 - 3.7mm

## Main Use

- Rapidly increases the pH of acidic soils and maintains the effect for months.
- Faster action than that of products derived from carbonates.
- Promotes soil biology in a natural way.

## Application Rates

The application doses will depend mainly on the desired increase to the soil pH and the type of soil. It can be applied with fertiliser spreaders or according to the cultivation practice. Its precision granulometry allows it to be evenly distributed and manipulated by all types of equipment, ensuring a perfect distribution in the soil.
