GC BioForce CaP

Professional organic, long-lasting granular fertiliser and biostimulant for soils

GC BioForce CaP is an organic multi-technology granular fertiliser, specially designed to be used as a base fertiliser in acidic soils.

Key Product Attributes

GC BioForce CaP is a black minigranular fertiliser (2.7 - 3.7 mm) that contains humic substances and free L-amino acids to provide crops with constant biostimulation.

All micro elements are complexed with lignosulphonate for maximum uptake.

The formulation combines fast and slow-release calcium for enhanced performance of low pH soils.

Analysis (w/w)

Phosphorous Pentoxide soluble in mineral acids (P_2O_5)	17%
Potassium Oxide soluble in water (K_2O)	5%
Total Calcium Oxide (CaO)	25%
Total Magnesium oxide (MgO)	3.1%
Sulphur trioxide soluble in water (SO_3)	8%
Total Zinc (Zn)	0.1%
Manganese (Mn) total	0.1%
Neutralizing value	20%

Main Use

GC BioForce CaP is mainly used as a complete base fertiliser for a wide range of organic crops grown in acidic soils or in soils where phosphorus and calcium are needed.

It is an ideal background fertiliser for cereals, legumes, tubers, industrial crops as well as blueberry and fruit trees.

Application Rates

The application doses will depend mainly on the level of production expected by the crop to be fertilised and the type of soil. It can be applied with fertiliser spreaders or according to the cultivation practice. Its precision granulometry allows it to be evenly distributed and manipulated by all types of equipment, ensuring a perfect distribution in the soil.
